

What it looks like in practice:

```
import intake  
cat = intake.open_catalog("https://tcodata.mpimet.mpg.de/catalog.yaml")  
cat.BC0.surfacemet_wxt_v1.to_dask().T.resample(time='1ME').mean().plot()
```

Supplement: versioning philosophy

- **Versioning should facilitate**
 - **reproducibility**
 - **usability**
 - **interpretability**
- **We are working towards a nice implementation**

```
v1 = DatasetVersion("1", "h77bc9d", "2010-12-09", "2020-12-09")
```

- **Something maximally up-to-date is nice for users and developers**

```
bleeding = DatasetVersion("latest", "main", "2010-12-09")
```
