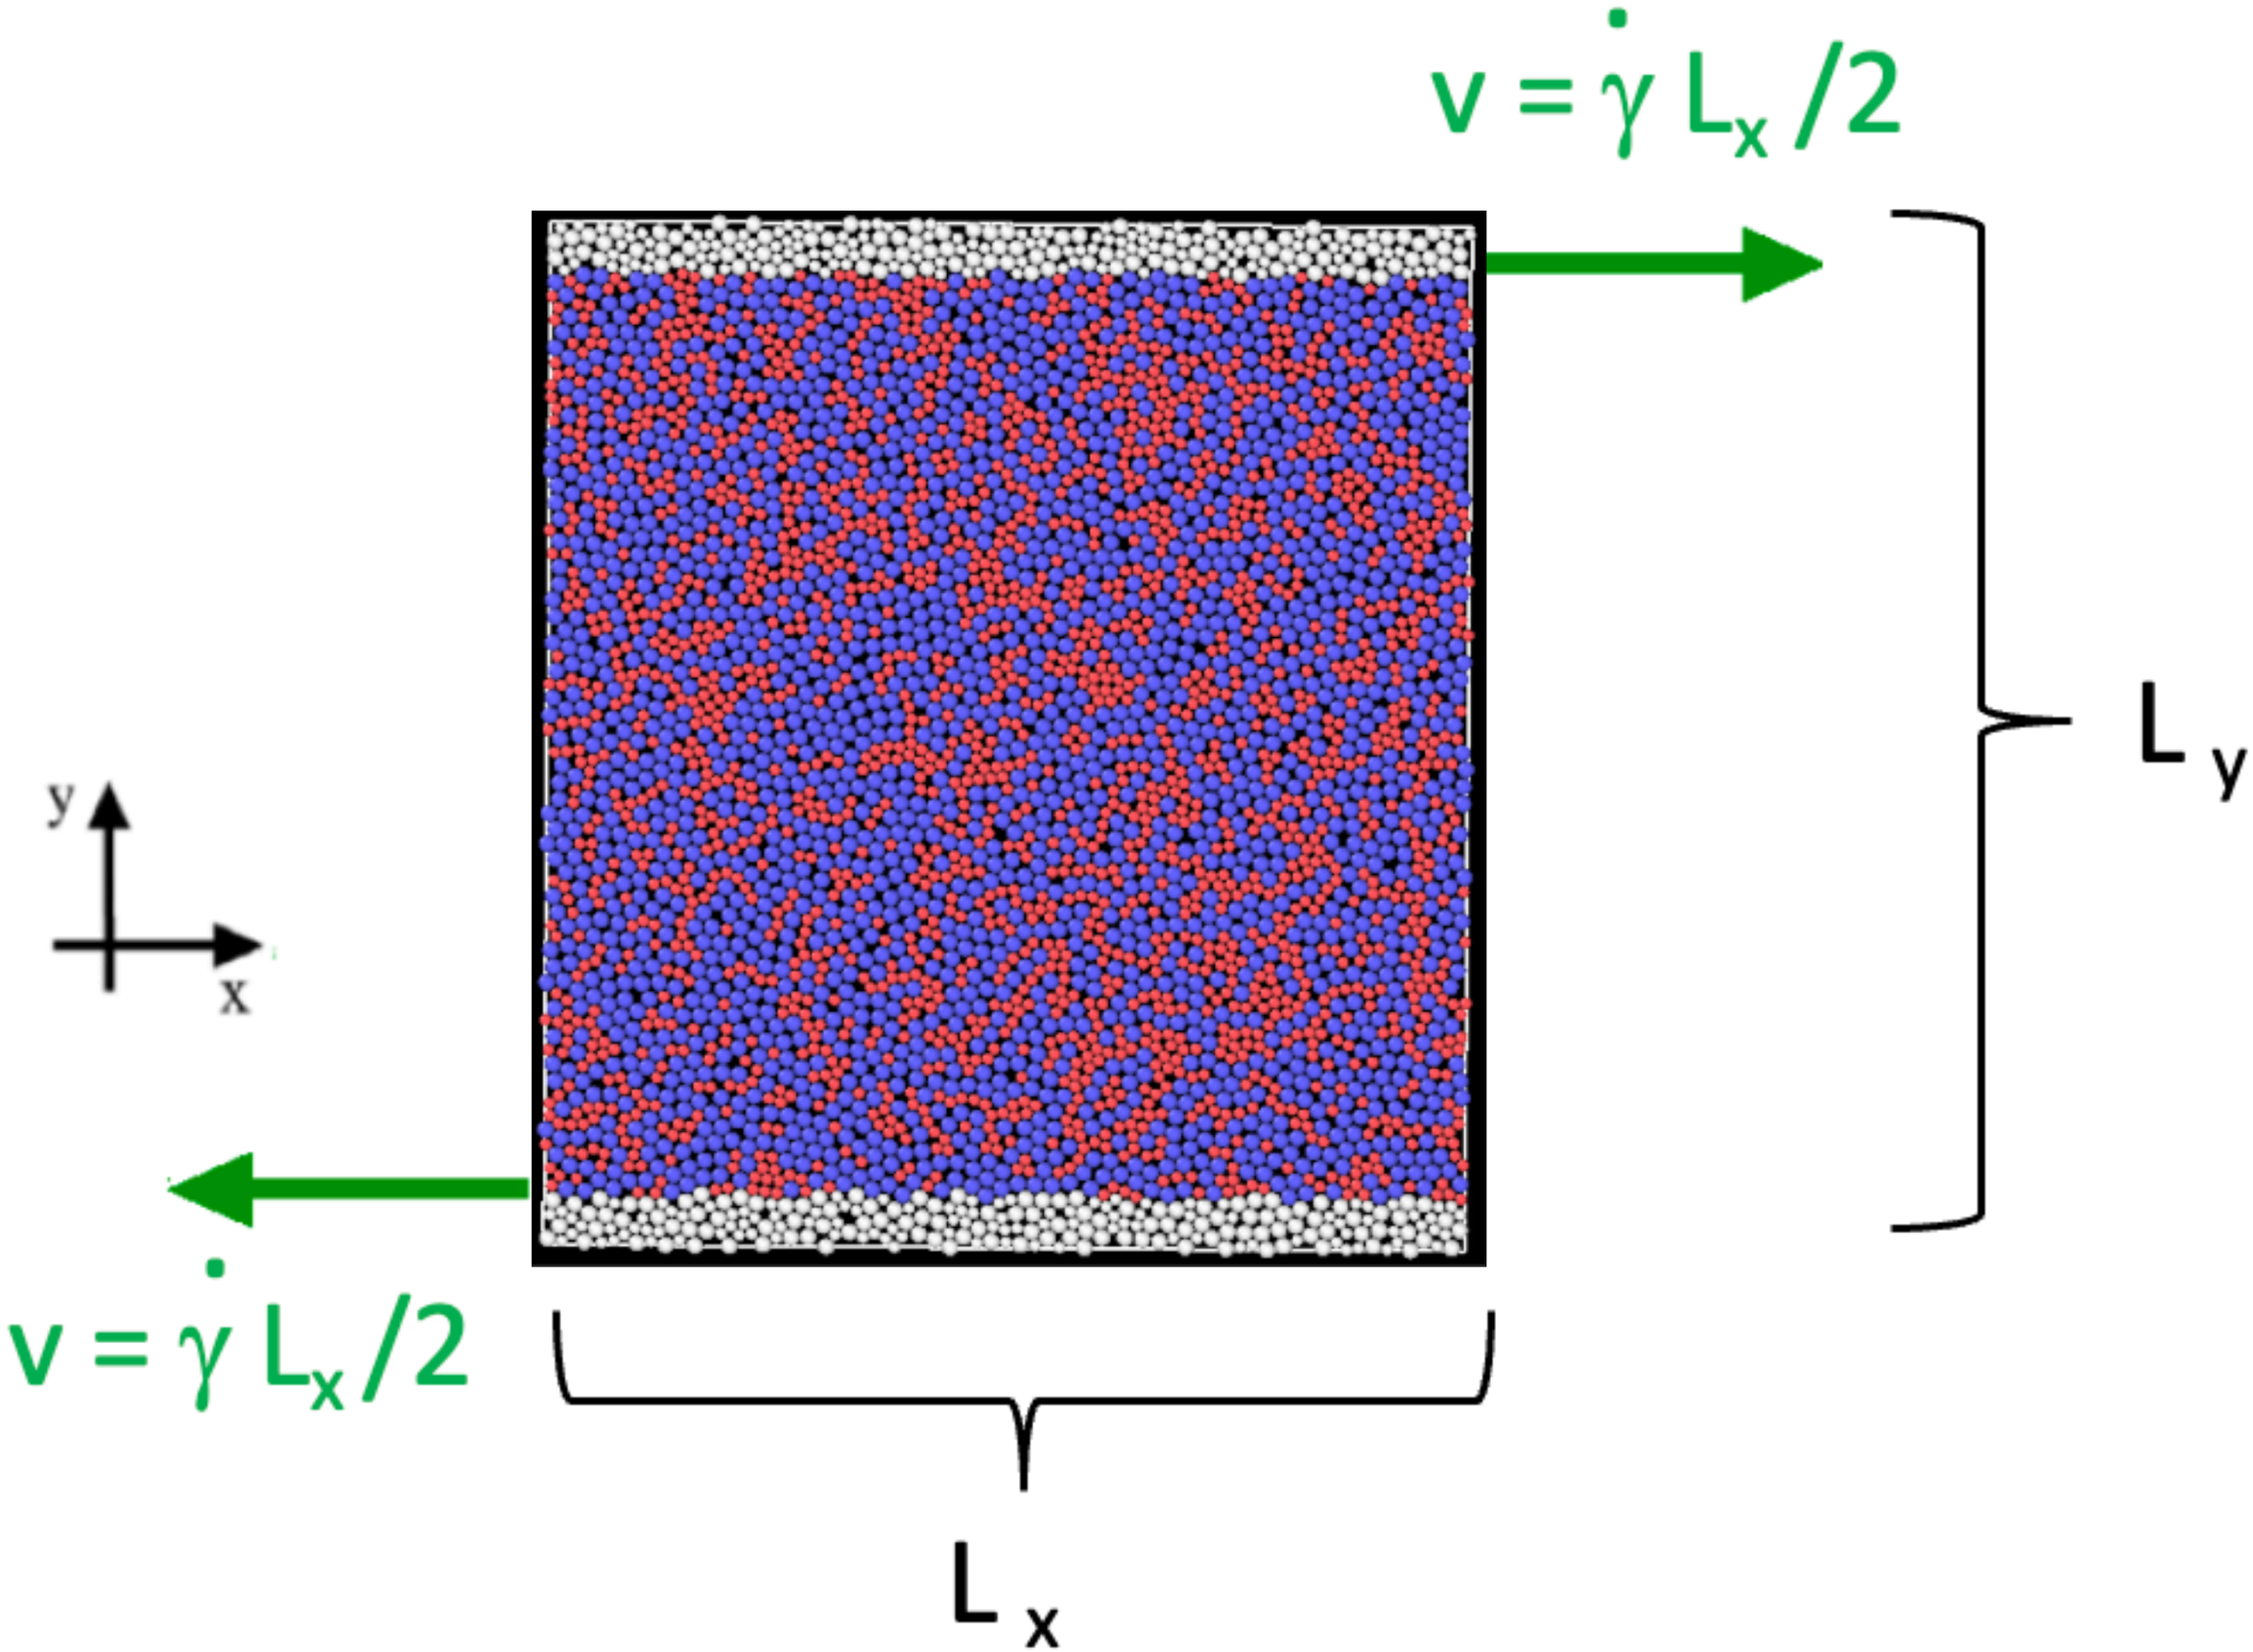
Simulating time-evolution of system at two characteristic periods

1. **transient era:** shear begins to propagate into system

2. **steady state**: arbitrarily long times

4



$v = \dot{\gamma} L_x/2$
L_y
y
x
$v = \dot{\gamma} L_x/2$
L_x

Details about MD simulations with LAMMPS can be found in appendix

Simulating time-evolution of system at two characteristic periods

1. **transient era:** shear begins to propagate into system

2. **steady state**: arbitrarily long times
