

Supplement: answering philosophy

- **Versioning should facilitate**
 - **reproducibility**
 - **usability**
 - **interpretability**
- **We are working towards a nice implementation**
- **Something maximally up-to-date is nice for users and developers**

```
v1 = DatasetVersion("1", "h77bc9d", "2010-12-09", "2020-12-09")
```

```
bleeding = DatasetVersion("latest", "main", "2010-12-09")
```

would be nice to have stable
datasets *and* growing datasets

```
stable_latest = DatasetVersion("1.dev", "h77bc9d", "2010-12-09")
```

Supplement: versioning philosophy

would be nice to have stable
datasets *and* growing datasets

- Versioning should facilitate

- reproducibility
- usability
- interpretability

```
stable_latest = DatasetVersion("1.dev", "h77bc9d", "2010-12-09")
```

- We are working towards a nice implementation

```
v1 = DatasetVersion("1", "h77bc9d", "2010-12-09", "2020-12-09")
```

- Something maximally up-to-date is nice for users
and developers

```
bleeding = DatasetVersion("latest", "main", "2010-12-09")
```

Supplement: (discretized?) infrastructures + pipelines
